SUMMARY

Full-stack software engineer with 5+ years designing, building, and operating **distributed backend systems** at national scale, spanning **.NET Core microservices, relational data modeling and SQL optimization**, and full-stack ownership through **Angular** on the frontend. Currently a founding engineer directing production **AI-coding-agent workflows** via **Claude Code** within a human-supervised engineering model. Track record of leading teams, mentoring engineers, and taking end-to-end ownership of critical systems in both startup and highly regulated government environments.

PROFESSIONAL EXPERIENCE

Synexar, Inc.

Bengaluru, India (Remote)

Founding Software Engineer

May 2026 - Present

- Own full-stack technical direction and architecture end to end using **.NET, Angular, PostgreSQL**, and **Azure**, making independent low-level and high-level design decisions across backend, database, and infrastructure for an AI-native healthcare startup.
- Directed **AI coding agents** through **Claude Code** within an agentic, human-supervised engineering workflow across development, debugging, refactoring, and testing, backed by a structured change-impact and verification process.
- Delivered a **HIPAA-compliant centralized audit logging system** with a reporting dashboard optimized for fast retrieval, indexing high-frequency columns and using **keyset (cursor-based) pagination**, validated end to end with **Playwright** for regression-safe deployments.
- Stabilized a key hospital front-office intake feature, resolving complex data-persistence issues and integrating **Azure OCR** to extract patient details from driving licenses and insurance cards, **reducing manual entry by 40%**.
- Led core restructuring of the platform's **multi-tenant architecture**, redesigning master tenant tables and implementing **PostgreSQL Row-Level Security (RLS)** to model real-world clinic and hospital structures with stronger data isolation.
- **Reduced SSO login time by 50%** by streamlining the authentication flow and optimizing auth validation to minimize redundant user verification.

Center for Smart Governance, Government of Karnataka

Bengaluru, India

Software Engineer

Apr 2025 - Apr 2026

- Architected and optimized backend **microservices** for **Kaveri 2.0**, a statewide property-registration platform serving **69M+ residents** and processing **15M+ API requests daily**, achieving up to **70% reduction in API latency** through schema redesign, strategic indexing, and query optimization.
- Designed idempotent, transactionally safe **.NET Core REST APIs**, documented with **Swagger**, for **9,000+ daily registrations** supporting Rs. 20,000+ crore in annual government revenue, engineered for fault tolerance and high availability under peak load.
- Enforced secure authentication and authorization using **JWT, RBAC**, API keys, schema validation, and **Redis** rate limiting, ensuring compliance and auditability for **40,000** daily active users in a highly regulated environment.
- Leveraged AI-assisted development tools (**GitHub Copilot, Cursor IDE**) to accelerate feature development, refactoring, and test-case generation, improving delivery speed and code quality.
- Optimized an **MIS dashboard** covering **30+ reports**, improving report generation **speed by 27%** on average through streamlined third-party data flows and database query optimization, including indexing, joins, and pagination.

Associate Software Engineer

Jun 2023 - Mar 2025

- Engineered **Angular** frontends with reactive forms and lazy loading, supporting real-time validation, dynamic valuations, and secure data handling for authenticated and guest users across a **900,000** monthly-active-user base.
- Established **Azure DevOps CI/CD** pipelines for automated deployment, testing, and monitoring of high-availability microservices, accelerating delivery cycles and supporting platform reliability under peak load.
- **Led a team of 4 developers** within Agile/Scrum SDLC cycles, with full end-to-end ownership of multiple critical microservices and modules from architecture through production deployment; served as the main technical point of contact with stakeholders, delivering features on schedule with **zero major incidents**.
- Established a **pull-request-based code review process** for the team, enforcing coding standards and catching defects before merge.

Junior Software Engineer

Aug 2021 - May 2023

- Built **Kaveri 2.0** modules from the ground up, delivering complex workflow screens such as fee calculation and integrating multiple statewide land and property record systems, including **Bhoomi** and **e-Aasthi**, via **SOAP** and **XML**-based web services.
- Single-handedly designed and launched the in-house **360° Feedback application** (.NET Core MVC, **Angular**, **MySQL**, Entity Framework) with role-based authentication, enabling peer/upward feedback for **500+ users** - earning two promotions.

TECHNICAL SKILLS

Programming Languages: C# (expert: .NET, ASP.NET Core, Entity Framework, LINQ), SQL (expert: query optimization, schema design, PostgreSQL, MySQL), TypeScript (advanced: Angular, reactive forms, async patterns), Python (intermediate: scripting, automation), Java, Node.js (working proficiency)

Backend & Systems: REST APIs (Swagger-documented), SOAP, XML, API Management, Microservices, Distributed Systems, System Design & Architecture (HLD/LLD), Multi-Tenant Architecture, Authentication & Authorization (JWT, RBAC, SSO), Caching (Redis), Rate Limiting, High-Availability Systems

Databases: PostgreSQL (expert-level optimization, indexing, Row-Level Security), MySQL, MongoDB (personal projects), Query Optimization, Schema Design, Transaction Management

Cloud & DevOps: Azure (compute, storage, Cognitive Services/OCR, DevOps), Azure DevOps, CI/CD Pipelines, Docker, Git

AI-Native Engineering: Claude Code, AI Agent Orchestration, GitHub Copilot, Cursor IDE, Prompt Engineering, Code Review Automation, Human + AI Collaborative Development Workflows

Frontend & Testing: Angular, AngularJS, HTML, CSS, Playwright (end-to-end testing)

Engineering Practices: Agile/Scrum SDLC, Code Reviews (established and ran a pull-request-based review process for a 4-developer team), Source Control Management

EDUCATION

International Institute of Information Technology, Bangalore (IIIT-B)

Bengaluru, India

Master's, Computer Programming (Integrated M.Tech, Electronics & Communication)

Jun 2016 - Apr 2021

- Topics: Systems design, distributed systems, software architecture.

CERTIFICATIONS

Systems Design Assessment, AlgoExpert (2025) · Microsoft SQL Server Reporting Services (SSRS), Udemy (2021)
